

Crossing Safety Improvement Program

FY 2000 - 2004

**PROPOSED GRADE CROSSING PROTECTION FUND
PROJECTS FOR LOCAL ROADS AND STREETS**

ILLINOIS COMMERCE COMMISSION

APRIL, 1999

April 7, 1999

The Honorable George H. Ryan
Governor

The Honorable James "Pate" Philip
President of the Senate

The Honorable Emil Jones, Jr.
Senate Democratic Leader

The Honorable Michael J. Madigan
Speaker of the House

The Honorable Lee A. Daniels
House Republican Leader

Dear Governor Ryan and Members of the Legislative Leadership:

Pursuant to Public Act 90-659 the Illinois Commerce Commission submits this Crossing Safety Improvement Program for Local Roads and Streets in Illinois. As the report indicates, in each of the next five years spending for crossing safety will increase by approximately 40% as compared to the average annual spending for each of the previous five years. In addition, for the next two years, projected annual spending will be more than double the average annual spending in the previous decade.

Within the timeframe of this plan a number of grade crossing separations will be constructed or reconstructed. In addition, automatic flashing light signals and gates, circuitry upgrades and over 2500 wayside signal monitoring devices will be installed. The synchronization of linked traffic lights and crossing signals will also be improved at locations throughout the state.

Although the cause of the recent Amtrak accident in Bourbonnais has not yet been determined, that accident - and others - are constant reminders of the tragedies we must strive to avoid. It is our hope that the increased emphasis on crossing safety as outlined by this program will save lives.

Sincerely,

Richard L. Mathias
Chairman

INTRODUCTION

The Illinois Commerce Commission has the statutory responsibility to improve safety at public railroad/highway crossings in the State of Illinois. There are 9,064 grade level crossings, of which 936 are on state roads and 8,128 are on local roads, and 2,779 grade separated (bridge) crossings. Another 5,207 grade crossings are on private property, not under the jurisdiction of the state. Nationally, Illinois is second only to Texas in the total number of railroad crossings.

The Commission orders improvements on public crossings with the cost of such improvements borne by the railroads, and state and local governments. On state roads, the Illinois Department of Transportation (IDOT) pays the majority of the costs through the State Road Fund. For local roads¹, the state created the Grade Crossing Protection Fund (the Fund) to bear the majority of the costs of improvements.

On July 30, 1998 Public Act 90-659 was signed into law, requiring the Illinois Commerce Commission to publish annually a five year plan of projected safety improvements at public railroad crossings on local roads. This document sets forth the first such plan.

RAILROAD CROSSING SAFETY — THE THREE E's

Illinois is one of the key transportation hubs in the nation. With nearly 8,000 miles of railroad track, its rail system is the second largest in the nation with the largest rail freight hub in Chicago. Illinois has the third largest highway system in the nation, with 138,000 miles of highways, streets and roads and more than 25,000 bridges. Both the rail and highway systems are among the most heavily used in the nation in terms of volume of traffic. Much of the traffic is concentrated in the Chicago metropolitan region where the urban mass transit system serves an average of nearly 600 million passengers a year over an extensive network of bus and rail routes.

Keeping the grade crossing portion of this transportation network operating safely and efficiently involves local, state and federal governments as well as the private sector. These efforts can be summarized as the Three E's — Education, Engineering and Enforcement.

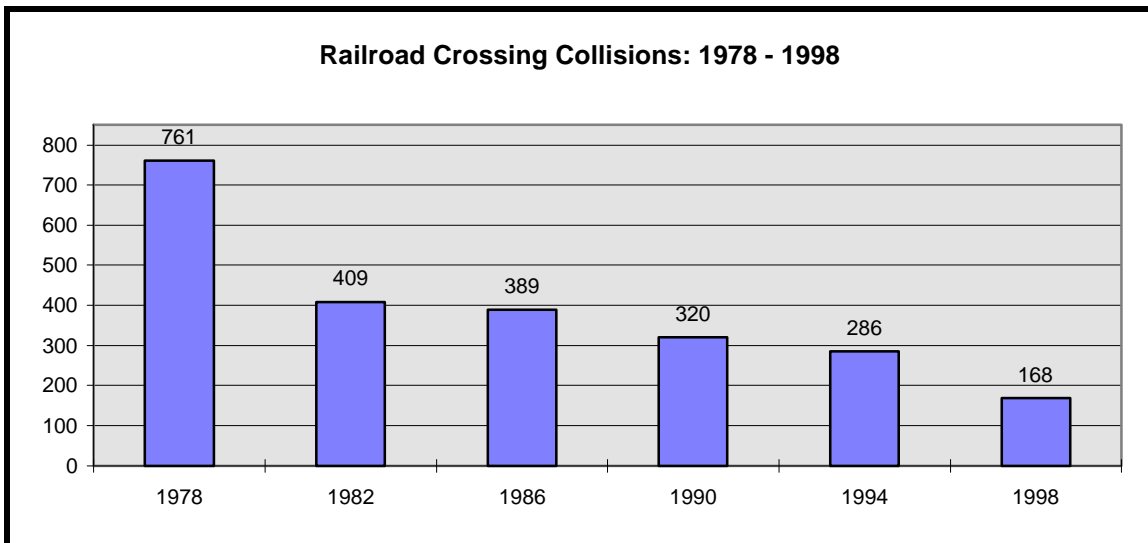

¹ Local roads are highways, roads or streets on the county highway, township and road district, and municipal street systems.

Education: The Operation Life Saver program is a public-private partnership designed to increase public awareness of highway-rail grade crossing hazards. It also strives to improve driver and pedestrian behavior at railroad crossings by encouraging compliance with traffic laws relating to crossing signs and signals.

Enforcement: Enforcement of existing traffic and trespass laws is key, especially the issuance of \$500 fines to persons crossing railroad tracks after the warning signals have activated.

Engineering: Grade crossing safety improvements are also critical to reducing collisions. The Commission orders physical and system improvements, including the installation and upgrading of grade crossing warning signs and signals and, where warranted, grade separations. While education and enforcement are absolutely essential, the focus of this report is the engineering of capital improvements to further railroad crossing safety on local roads.

Since 1978, the Grade Crossing Protection Fund has provided over \$247 million to fund safety improvements at over 5,200 local crossings in Illinois. In addition, IDOT expends approximately \$30 million annually in state and federal funds on various projects related to crossing safety. This combined investment in education, engineering and enforcement over the last 21 years has paid a dividend of an 80% reduction in collisions at railroad crossings in this state.

Source: Federal Railroad Administration

Recently, the Commission has begun managing the Fund on a cash flow basis. This enables the Commission to increase the number of projects it orders and better match cash inflows with expenditures. As a result, Commission staff has projected that in each of the next five years estimated average spending from the Fund for crossing safety will increase by approximately 40%, as compared to average annual spending for each of the previous five years. Additionally, for the next two years, estimated annual spending will be more than double the amount of average annual spending in the previous decade. In addition, the Commission's staff is exploring the potential use of bonding for some projects.

RAILROAD CROSSING SAFETY FUNDING

Each month \$1.5 million in state motor fuel tax receipts is transferred from the motor fuel tax fund to the Grade Crossing Protection Fund. This Fund, appropriated to the Illinois Department of Transportation but administered by the Illinois Commerce Commission, is used to assist local jurisdictions (counties, townships and municipalities) in paying for safety improvements at railroad crossings on local roads. Monies from the Fund cannot be used for crossing safety improvements on the state road or highway system. Those improvements are funded directly by the Illinois Department of Transportation. The following types of projects are typically paid for from the Grade Crossing Protection Fund:

- **Warning device upgrades:** Installation of automatic flashing light signals and/or gates and/or signal circuitry improvement at existing at-grade crossings
- **Grade separations - new and reconstructed:** Construction/reconstruction/repair of a highway over or under railroad tracks
- **Grade separations - vertical clearances:** Lowering the highway pavement surface under a railroad underpass to improve vertical clearance for motor vehicles
- **Interconnects:** Upgrading the circuitry at grade crossings where warning signals are connected to the adjacent traffic signals so that the two systems operate in a synchronized manner
- **Approaches:** Improvements to the portion of the public roadway directly adjacent to the crossing surface
- **Connecting roads:** Construction of a roadway between a closed crossing and an adjacent open, improved crossing
- **Wayside monitoring devices:** Sensor devices in the circuitry of grade crossing warning devices which immediately alert the railroad to any failures in warning device operations

The cost of railroad crossing safety improvements varies substantially depending on the nature of the work undertaken. The total cost of a standard installation of gates with automatic flashing light signals on a two lane road is approximately \$150,000. Additional costs for roadway improvements could typically range from \$2,000 to \$25,000 depending on the road type and location. Construction of grade separation structures is very costly. Total cost for reconstruction of an underpass can range from \$400,000 for pavement lowering to \$3 million for complete reconstruction. Construction of a new underpass could cost as much as \$5 million. Bridges carrying roadways over railroads can cost from \$400,000 for a rural structure to \$40 million for a multi-lane, multi-track urban structure. One of the most expensive grade separations approved by the Commission to date is expected to cost approximately \$9 million in 1998 dollars. Typically, the Fund pays up to 60% of the cost for grade separation structures and 85% to 95% for grade crossing improvement projects. When those costs are multiplied by the number of crossings in need of improvement the challenge of allocating scarce funds becomes apparent.

The cost for the installation of experimental systems can be substantial. Projects such as IDOT's technology demonstration of the Vehicle Arresting Barrier, at a total cost of approximately \$3 million for three crossing locations, are important yet costly. While no monies from the Grade Crossing Protection Funds have been allocated for use in this project, or any other experimental technology demonstration, the Commission is monitoring the test of this experimental system.

In addition to crossing improvements, approximately 6,000 public grade crossings have been eliminated over the past twenty years. Crossings have been eliminated due to rail line abandonments and consolidation of multiple crossings located in close proximity to one another. Elimination of grade crossings on active rail lines requires careful consideration of potential safety hazards and the cost of maintenance, balanced by the access needs of the crossing users.

CROSSING SAFETY IMPROVEMENT PROJECTS

This report presents the railroad crossing safety capital improvements the Commerce Commission staff proposes to implement during FY 2000. The report also looks ahead to the projects contemplated for the years FY 2001 through FY 2004. In all cases it is assumed that any required local funding match will be available.

The Fiscal Year 2000 project list includes primarily capital improvement projects which local governments or railroads have previously submitted to the Commission for evaluation and approval. The Year 2001 plan is constructed in a similar fashion. Future plans will include projects based on the following established priorities:

- completing interconnected crossing improvements;
- corridor projects; and
- improving crossings with a high collision history.

FY 2000 PLAN

It is estimated that in FY 2000 the Commission staff will recommend safety improvement projects for 660 crossings in 37 counties. Projects expected to be ordered in FY 2000 are listed in Appendix 1. Included in this projection is funding for seven corridor projects, involving 35 grade crossings on five railroad lines. Corridor projects provide the means to upgrade a series of consecutive crossings more rapidly and more efficiently by facilitating the deployment of labor and materials to that area.

The Commission will also set aside approximately \$1 million in contingency funds to address emergency projects which may require rapid resolution. FY 2000 projects are summarized in Table A.

TABLE A		
FY 2000 Crossings by Project Type		
Total Estimated Cost Projected to be borne by The Fund		
<u>PROJECT TYPE</u>	<u>CROSSINGS</u>	<u>\$MILLIONS</u>
Upgrade warning devices	80	9.62
Grade separation: New	2	2.80
Grade separation: Reconstruct	2	2.30
Grade separation: Vertical Clearance	2	.59
Interconnect	9	.85
Crossing surface improvement	-	-
Approach(es)	3	.02
Connecting road	3	.18
Closure	9	-
Wayside Monitoring Devices	550	1.10
Contingency for emergencies		1.00
Total	660	\$ 18.46

FY 2001 - 2004 PLAN

Projects which are expected to be undertaken in Years 2001-2004 are listed in Appendix 2. For those four years, Commission staff anticipates that projects totaling approximately \$71 million, and affecting more than 2,400 crossings, will be submitted to the Commission for its consideration. Those projects are summarized in Table B below.

T A B L E B

FY 2001 - 2004 Crossings by Project Type

PROJECT TYPE	CROSSINGS	\$MILLIONS
Upgrade warning devices	225	28.14
Grade separation: New	4	10.39
Grade separation: Reconstruct	8	19.66
Grade separation: Vertical Clearance	-	-
Interconnect	15	4.50
Crossing surface improvement	-	-
Approach(es)	-	-
Connecting road	1	.04
Closure	7	.01
Wayside Monitoring Devices	2,200	4.40
Emergencies		4.00
Total	2,460	\$ 71.14

ACTIVE PROJECTS

There are currently 164 active improvement projects in 62 counties throughout the state. These projects, distinct from those already identified in Tables A and B, are summarized in Table C below. Appendix 3 lists each individual project with specific location and cost information.

T A B L E C

Active Projects by Project Type

PROJECT TYPE	CROSSINGS	\$MILLIONS
Upgrade warning devices	267	18.81
New Crossing	1	.58
Bridge Construction/Reconstruction	53	74.46
Interconnect	12	2.27
Crossing surface	-	-
Approach(es)	-	-

Connecting road	1	13
Total	334	\$ 96.25

LEGEND: (Applies to all Appendices)

<u>Term</u>	<u>Definition</u>
County	County in which project will take place
Location	Community where crossing is located
Street/Highway	Name of Roadway
Railroad	Name of Railroad responsible for crossing
Type of Improvement	Proposed Safety Improvement
Total Project Cost	Cost of Project; includes Grade Crossing Protection Fund amount, and all other funding sources
USDOT/AAR ID	Crossing Identification Number
USDOT	United States Department of Transportation
AAR	American Association of Railroads
